TIKTOK SHOP SEA REGIONAL CASE CHALLENGE · MALAYSIA · WINNING THE MALAYSIAN WALLET

Order Pertama Mak

Help a parent make a safe first purchase, then earn the second

> *“Dulu Mak ajar kita bertatih, sekarang kita teman Mak memilih”*
>
> Mum taught us our first steps; now we walk with her as she chooses.

PROBLEM

Discovery wins, but buyers don’t return

BET

Activate parents through their children

PROOF

A three-arm trial with pre-committed stop rules

Audrey Nguyen and Rachel Tran, Team The Fools

MEET THE DUET

TEAM THE FOOLS: ONE PITCH, TWO VOICES

Audrey Nguyen

THE STRATEGIST

STRATEGY · LANGUAGE · VIDEO EDITING

I lead strategy, language and video editing, turning the analysis into a clear plan and a pitch you will remember.

STORY × SYSTEM

Rachel Tran

THE BUILDER

DATA · PROTOTYPES · AI

I run the technical side: data, prototypes and AI collaboration, turning raw numbers into something you can click, test and trust.

Diagnose: TikTok Shop grows +30%, but repeat buying and trust leak

Stage	Status	Evidence
Awareness	Strength	Content and discovery 4.7 vs 3.3: our only lead
Consideration	Leak	Only 34% of viewers add to cart; trust 3.2 vs 4.2
Purchase	Leak	42% of checkouts unfinished; price 3.1 vs 4.5
Fulfilment	Leak	Reliability 2.9 vs 4.5; East delivery satisfaction 58% vs 84%
Retention	Slowing	Orders-per-buyer growth +16% → +10%

RM31 vs RM163

per new buyer who repeats: content-led vs campaign-led (5×)

55% → 18%

campaign-led share of spend vs share of repeat buyers

Not a reach problem: frequency and trust. Fix repeat behaviour first, and move spend only behind tests.

Choose: 41+ parents first — biggest basket, most room to grow

Segment	Buyers · GMV	Basket	Orders a year	90-day repeat	Our call
Scouts 18–25	40% · 31%	RM17–22	61–65	31–42%	Channel
Builders 26–40	48% · 56%	RM28–36	56–60	47–50%	Protect
Anchors 41+ (Mak)	12% · 13%	RM39 (highest)	44 (lowest)	38%	PILOT

+RM174m a year

744k buyers aged 41+ add 6 orders a year (half the gap to 31–40s) at their RM39 basket

RM16–33m saved

124–248k new parents via content-led (RM31), not campaign-led (RM163), acquisition

Why 41+? A proven mechanic: Taobao family accounts (+42% YoY), Grab family rides.
Not now: Builders, Comparers, lapsed triers, East Malaysia (phase 2).

Pilot: explain existing protection, add family help, let a three-arm test decide

Stage	What we test	Measured by
Awareness	Jemput Mak: opt-in family invite	Parent first orders / 100 Scouts
Consideration	Mak Mode: guarantee and 30-day returns on the card [1]	Product → cart
Purchase	Troli Keluarga + Kunci Deal: family may pay; price locked 24h	Checkout completion
Fulfilment	Dated Promise: one shared delivery date	Promise kept ≥ 90%
Retention	Order Pertama Mak: private first-order milestone	Parent order in 90 days

Three arms · ~50k Scouts each

A Control

B Jemput Mak + Mak Mode

C B + Troli Keluarga + Kunci Deal

Pre-set rule

Decision	Orders/100	Repeat	Cost
Scale	≥ 8	≥ 45%	≤ RM20
Iterate once	5–8	40–45%	RM20–31
Stop	< 5	< 40%	> RM31

No new discounts: same promotions in every arm. Scale only if B or C beats A on contribution per assigned Scout, with no rise in disputes or unauthorised payments.

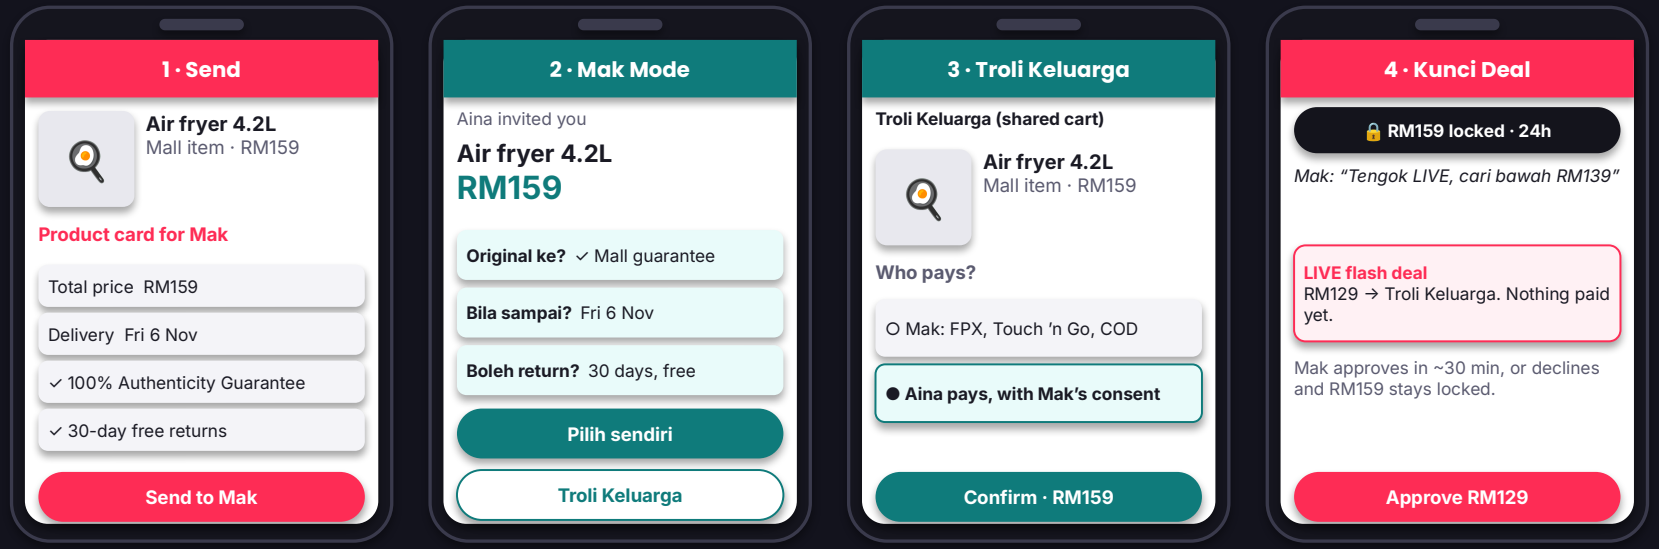

Young moment: one card, consent and a **locked deal** replace screenshots

40% → 31%	18–25s: share of buyers vs of GMV
RM17–22	their basket, vs RM39 for 41+
31–42%	90-day repeat vs 47–50% at 26–40
69%	of 18–24 online buyers use TikTok Shop [2]

TODAY VS NEW · the same five stages as Mak's journey

	AWARENESS	CONSIDERATION	PURCHASE	FULFILMENT	RETENTION
TODAY typical journey (A2)	Sees a demo (air fryer, skincare set) on a creator video	Sends a screenshot or link to a parent on a chat app	Parent asks: "Original ke? Bila sampai? Boleh return?"	Switches between chat and product page to answer; "Mak, bukan macam tu!"	Parent buys elsewhere, waits or declines: no TikTok Shop order
NEW Jemput Mak	Same demo on a Mall item; taps "Jemput Mak"	Sends one product card: item, total price, delivery date, protections [1]	Parent consents and chooses what to buy	Parent buys, or a family member pays via Troli Keluarga	Both track delivery; private milestone; the 18–25's credit goes to their own orders

THE UX/UI · Aina's phone (1) and Mak's phone (2–4)

One moment, five taps: Kunci Deal is 2–5

1 Send Aina sends one card: item, price, date, protections
2 Lock Aina holds today's RM159 for 24h; Mak can still say no
3 Ask Mak asks Aina to watch LIVE (target under RM139)
4 Grab Flash deal: Aina grabs RM129 into Troli Keluarga
5 Approve Mak approves within ~30 min, or declines

Steps 0–17 · both phones · Mak Mode in BM, EN, 中文 , தமிழ்

Young moment · 6 / 9 · Exh. 4, 8, 9 · [1] TikTok Newsroom, 4 Jul 2025 · [2] Ipsos Malaysia, 16 Jul 2026 · Screens are concept mock-ups with sample data; Malay lines are illustrative scripts, not research quotes · Aina can't buy without Mak: no new discount, the lock holds today's price

Run it: AI drafts, rules guard money and consent, people decide

AI predicts and drafts

Invite model after trial data; delivery dates from lane data; 4-language copy, native-reviewed.

Rules guard

Policy card from verified fields; PDPA [5] consent, payment caps and deal-lock limits.

People decide

Disputes, scale or stop: AI summarises, accountable owners make the call.

KPI tree: GMV = Buyers × Orders per buyer × Basket

Buyers

≥ 8 new parents per 100 Scouts

Orders per buyer

44 → 50 a year; 90-day repeat 38% → ≥ 45%

Basket

Parent basket held at ≈ RM39

Guardrails: promise kept ≥ 90% · disputes and opt-outs ≤ control · no unauthorised payments · drop the card if < 5 in 100 Scouts share it

M1–2 Validate
20 family interviews; baseline

M3–4 Pilot
8-week test, West Malaysia

M5–7 Gate
Scale, iterate or stop at month 7

M8–12 Scale
Gradual roll-out with a holdout

Appendix: key figures, calculations and sources

Figure	Value	Calculation (case exhibit)
Orders-per-buyer growth	+15.9% → +9.9%	Exh. 1: 52.8/45.6 and 58.1/52.8
Add-to-cart · checkout drop	34% · 42%	Exh. 5: 2.5m ÷ 7.4m; 1 − 0.87m ÷ 1.5m
Cost per new buyer who repeats	RM31 · RM163	Exh. 5: RM15 ÷ 49%; RM31 ÷ 19%
Campaign-led share	55% of spend · 18% of repeaters	Exh. 5: 0.32m × RM31 = RM9.9m of RM18.2m; 61k ÷ 330k repeaters
41+ base	744k buyers	Exh. 1 × Exh. 4: 12% × 6.2m
Value gap	+RM174m a year	744k × 6 orders × RM39; 6 = half of (56 − 44) orders, Exh. 4
Scouts · new parents	2.48m · 124–248k	6.2m × 40%; assumption A4: 5–10% activate
Acquisition saving	RM16–33m	124–248k × (RM163 − RM31 = RM132)
Year-1 scenario (scale from month 8)	RM80–160m	RM174m × 5/12 × 50–100% + 124–248k × RM1,695 × 2.5/12
Platform return per RM1 of subsidy	RM0.31	8.5% take rate × RM3.6 GMV per RM1 (Exh. 2, 9)
